1. Executive Summary

Platform Vision

The Threadspace's Clinical Note Taker agentic module is an advanced, AI-driven solution engineered to address two critical needs of specialty dental practices: the administrative burden of clinical documentation and the strategic necessity of relationship management with referring doctors. By leveraging audio recordings as the primary input, the platform automates note-taking, letter generation, and data analysis, freeing up clinical staff to focus on patient care and high-value interactions.

The platform is part of a larger project aimed at comprehensive planning and workflow optimization for dental specialists including periodontists, orthodontists, oral surgeons, endodontists, and more. The current focus is on the Clinical Note Taker feature, which represents one component of the "Relationship Agent" system that includes various coordinated agents such as the Clinical Note Agent, and Marketing Agent.

A critical business context to understand: referring doctors are the source of approximately 90% of specialist practice revenue, with only 10% of patients coming from independent research. Thus, maintaining strong relationships with referring doctors is vital to practice success, which this platform is designed to facilitate.

Core Modules

The platform consists of four integrated modules:

1. **Clinical Note Taker:** The daily operational tool for the entire clinical team. It facilitates the recording of patient sessions, AI-powered transcription, and the automated

generation of clinical notes, referrer letters, and patient communications.

2. **Templates Management:** A comprehensive system for managing document templates including master templates provided by the platform, custom templates created by the practice, and team templates shared within the practice.
3. **Memory Management:** A dedicated system that “teaches” the AI about practice-specific terminology and treatment types to improve the accuracy of the platform’s outputs.
4. **Relationship Management:** A suite of analytics and management tools for Growth Partners and Practice Owners. It offers deep insights into referral patterns, relationship health scores, and patient conversion funnels, enabling data-driven strategies to grow the practice. This module includes referring doctor memory profiles for personalizing relationships.

Target Audience

The platform is designed for multi-role use within specialty dental practices, including but not limited to:

- **Practice Owners/Administrators:** Overall management of the practice settings, analytics review, and strategic decision-making
 - **Dental Specialists:** Including periodontists, endodontists, oral surgeons, and orthodontists who provide specialized treatment
 - **Treatment Consultants:** Staff focused on treatment planning and case acceptance
 - **Receptionist/Front Office Staff:** Handling patient intake, arrival, and administrative tasks
 - **Growth Partners/Marketing Managers:** Managing relationships with referring doctors to increase referrals and practice growth
-

2. System Architecture: User Roles & Permissions

Role Definitions

- **Admin (Owner):** The super-user with complete control over the practice’s account. This role sets up the initial practice workflow, manages all users and permissions, defines global settings (e.g., default templates, data retention policies), and has access to all analytics across all locations and specialists. The Admin may or may not also be a

practicing Specialist.

- **Specialist (Producer):** A clinical provider who is the primary user of the note-taking features. They record sessions, review/edit/send letters, and can view their own analytics. They have the ability to override certain practice-wide preferences for their personal workflow (e.g., using a custom template instead of the practice default).
- **Growth Partner:** A non-clinical role focused on managing and nurturing relationships with referring doctors. Their primary interface is the Relationship Management module, including the Referrer Insights dashboard and individual doctor profiles.
- **Receptionist:** A front-office role responsible for managing the patient activity calendar, adding new patients, scheduling appointments, and handling initial data collection. They are primarily involved in the “Intake” and “Arrival” stages of the patient journey.
- **Treatment Consultant:** A role focused on patient conversion. They manage the “Exam,” “Treatment Planning,” and “Case Acceptance” stages of the patient journey and have access to treatment conversion analytics.

Permissions Matrix

Following are the quick selections provided by platform for different roles, though individual feature level permissions can be customized by Admin for individual team members added as well.

Feature/Module	Admin	Specialist	Growth Partner	Receptionist	Treatment Consultant
Record Sessions	Yes	Yes	Yes	Yes	Yes
Review/Edit/Send Letters	Yes	Yes	Yes	No	Yes
View All Analytics	Yes	Yes	Yes	Yes	Yes
View Personal Analytics	Yes	Yes	Yes	Yes	Yes
Manage Referring Doctors	Yes	Yes	Yes	Add Only	View Only

PROMPT ADVISERS

Manage Templates	Yes	Yes	No	No	No
Manage Memory	Yes	Yes	Yes	View Only (Practice), Yes for self	View Only (Practice), Yes for self
Manage Patient Calendar	Yes	Yes	Yes	Yes	Yes
Manage Users & Permissions	Yes	No	No	No	No
Template Creation	Yes	Yes	No	No	No
Template View	Yes	Yes	Yes	Yes	Yes
Recording/Dashboard Access	Full	Full	Full	Full	Full
Assign Patient to Specialist	Yes	Yes	Yes	Yes	Yes

Role-Based Session Checklist for Patient Journey

The system will recommend initial session list per supporting role and specialist, while still allowing practices to customize access according to their specific needs:

1. Based on practice selection between “Flexible” and “Strict” during setup:

- **Flexible:** More permissive default access, allowing overlap between roles
- **Strict:** More defined role boundaries with limited access between departments

2. Specialist visibility filtering:

- Users can filter the main dashboard to show only patients assigned to specific specialists
- Receptionists can select which specialists to display on their view, which persists between sessions

3. Admin/Owner special access:

- If owner is not a specialist/producer, their default dashboard is the All Locations Analytics

- If owner is also a producer, their main dashboard includes a filter to switch between locations

4. **Financial data visibility:**

- Financial analytics are restricted to Admin, Specialist, Growth Partner, and Treatment Consultant roles
 - Receptionist role cannot access financial analytics by default
-

3. Navigation Structure

Global Navigation Bar

The platform features a comprehensive navigation structure divided into two main sections:

Clinical Note Taker Section:

- **Dashboard:** The main operational hub (default landing page)
- **Templates:** Template management for letters and notes
- **Analytics:** Performance metrics for clinical operations
- **Memory:** Configuration for AI learning and terminology

Relationship Management Section:

- **Dashboard:** Overview of referring doctor relationships
- **Referring Doctors:** Complete directory of referring doctors
- **Insights:** Advanced analytics and reporting
- **Visit Planning:** Tools for scheduling and documenting visits

Dynamic Island Interface

A persistent, floating UI element appears at the bottom center of every screen, inspired by Apple's Dynamic Island concept:

1. **Voice Assistant Button:**

- Activates the AI voice assistant for hands-free interaction
- When active, blocks other microphone functions (recording or chatbot)
- Provides contextual assistance based on the current screen

2. Text Chat Button:

- Opens an AI chatbot interface for text-based assistance
- Can be used simultaneously with recording, but not with voice assistant
- Retains conversation history within a session

3. Record Button:

- Starts a new recording session
- Can be triggered from any screen
- Keyboard shortcut (Ctrl+Alt+R) also activates recording
- When recording is active, a timer displays the duration
- During recording, the system analyzes speech in real-time
- Recording is blocking for voice assistant but not for text chat

Technical Note: These functionalities are limited by browser capabilities. Recording will pause (saving progress) if the user switches tabs or minimizes the browser window. **This needs technical discovery**

Global Search Functionality

A search bar appears at the top of all screens providing unified search across:

- Patient names
- Referring doctor information
- Appointment details
- Transcript content (with date range filtering)
- Templates and documentation

Search results are categorized by type (Patient, Doctor, Appointment, Transcript) with direct navigation links to the relevant items.

Screen Hierarchy

The platform is organized with the following screen hierarchy:

Clinical Note Taker Module:

1. Main Dashboard

- Unassigned Recordings Section
- Patient Activity Calendar
- Dashboard Tabs (Letters, Referring Doctors, Find Patients)

2. Patient Profile Screen

- Accessed by clicking on a patient in the dashboard
- Contains all patient-specific information and documentation
- 3. **Templates Management**
 - Accessed from the Global Navigation Bar
 - Contains Master, My, and Team template sections
- 4. **Memory Management**
 - Accessed from the Global Navigation Bar
 - Contains Dictionary and Treatment Types sections

Relationship Management Module:

1. **Relationship Dashboard**
 - Overview of referring doctor relationships and engagement activities
 2. **Referring Doctor Insights Dashboard**
 - Comprehensive analytics for all referring doctors
 3. **Single Referring Doctor Screen**
 - Accessed by clicking on a referring doctor in any list
 - Contains analytics view, profile management, and memory profiles
 4. **Visit and Event Management**
 - Planning and tracking engagement activities
-

4. Onboarding Workflow: A Guided Implementation

Onboarding Objectives

The onboarding process is designed to be a mandatory, guided experience with multiple objectives:

1. Set up the system with practice-specific configurations
2. Import initial data for referring doctors
3. Educate users on core platform functionality through guided interactions
4. Ensure proper template configuration for document generation
5. Configure the patient journey workflow according to practice roles
6. Establish a foundation for accurate AI assistance

Admin/Owner Onboarding Experience

The Admin/Owner completes a 7-step process if they are producer as well:

1. Setup Practice Workflow

- Upon first login, the Admin is presented with a welcome screen and “Continue” button
- The system displays tabs for each specialty the practice offers (e.g., “Periodontist,” “Endodontist,” “Oral Surgeon”)
- The system pulls this specialty information from existing practice management systems (critical dependency)
- For each specialty, the Admin selects team roles (Front Office, Treatment Consultant, Specialist, Hygienist if applicable)
- A series of dropdown questions establishes responsibilities:
 1. “Who handles patient intake calls?” (options based on selected roles)
 2. “Who greets patients on arrival?”
 3. “Who performs the clinical exam?”
 4. “Who presents treatment plans?”
 5. “Who reviews and confirms financial arrangements?”
 6. “Who provides follow-up communication?”
- The system saves these settings as global defaults for the practice

2. Import Referring Doctors

- Admin clicks on “Import Referring Doctors” option
- System presents two methods:
 1. Individual doctor entry form
 2. Bulk import via CSV
- For bulk import:
 1. A “Download Template” link provides a CSV template
 2. A “View File Specification” link shows required fields
 3. Required fields include: Doctor Name, Practice Name, Email, Phone Number, Referral Type (Core/Premier/Community)
 4. Optional fields include: Address, Personal Interests, Birthday, Preferred Communication Method, etc.
 5. After upload, AI automatically maps CSV columns to system fields by analyzing headers and first 5 rows of data
 6. Admin confirms mapping by either accepting AI suggestion or manually dragging columns
 7. System displays a preview of the mapped data before final import
 8. Admin chooses to either “Override Existing Records” or “Skip Duplicates” based on email address
- Import confirmation shows number of records successfully imported

3. Set Preferences for Letters

- Admin selects which letter types to enable:
 1. Master Referrer Letter (checkbox)
 2. Master Patient Letter (checkbox)
 3. Master Clinical Note (checkbox)
- At least one letter type must be selected to continue

4. Review Templates

- For each selected letter type, a guided tour walks through the template structure
- The tour highlights different sections with tooltips explaining:
 1. Golden text: Information extracted from recordings (required)
 2. Blue text: Conditional information from recordings (optional)
 3. Black text: Static content that remains the same in all letters
- The admin cannot edit templates during this review phase
- A sample letter is generated by AI to demonstrate how the template works
- The admin must click “Mark as Default” to proceed
- Attempting to skip displays a warning: “If you skip, this letter type won’t be available in your workflow”

5. Setup Patient Workflow

- The system displays the “Wheel of Responsibility” interface, showing the 7 key stages of the patient journey:
 1. Intake
 2. Arrival
 3. Exam
 4. Treatment Planning
 5. Case Acceptance
 6. Treatment/Procedure
 7. Follow-up
- For each role (based on earlier selections), the admin assigns responsibility for patient journey stages
- The system generates recommended checklist items for each stage and role
- Previous answers (e.g., who handles financial arrangements) automatically pre-select relevant checklist items
- The admin can enable/disable specific checklist items or add custom items
- A confirmation checkbox acknowledges: “I understand that checked information points must be recorded for each patient”

6. Record First Session

- The admin is prompted to record a sample session
- The recording interface appears with the Session Checklist prominently displayed
- The checklist reflects the settings from the previous step

- A guided overlay explains how items are checked off as topics are discussed
- The admin can record a mock session or upload a pre-existing recording
- After recording, the system processes the audio and generates a transcript

7. **Generate Sample Letters**

- The system guides the admin through reviewing the AI-generated transcript and summary
- The admin is shown how to review and approve the auto-generated letters
- The system explains that after generating 10 letters, additional features will be unlocked
- Upon completion, the admin lands on the main dashboard

If Admin is not a producer, they perform just the first step which is “**Setup Practice Workflow**”.

Specialist Onboarding Experience

If the Specialist is not the Owner/Admin, their onboarding includes 6 steps (skipping the Practice Workflow setup):

1. **Import Referring Doctors**

- Same process as Admin, but settings only apply to this specialist if they choose to override practice defaults

2. **Set Preferences for Letters**

- Same options as Admin
- The specialist can choose to use practice defaults or set their own preferences

3. **Review Templates**

- Identical to Admin experience
- Any templates marked as default become this specialist's defaults

4. **Setup Patient Workflow**

- Similar to Admin experience, but changes only apply to this specialist's workflow
- Pre-populated with practice defaults that can be customized

5. **Record First Session**

- Identical to Admin experience

6. **Generate Sample Letters**

- Identical to Admin experience

Reception and Treatment Consultant Onboarding

A simplified onboarding flow focusing on their core responsibilities:

1. Review Patient Journey Responsibilities

- A guided tour through the patient journey wheel highlighting their specific role's responsibilities
- System clearly indicates which stages they're responsible for based on Admin setup
- Detailed walkthrough of the checklist items they need to cover during patient interactions
- Explanation of how their work impacts the overall patient journey

2. Recording Training

- Interactive tutorial on using the recording feature
- Step-by-step guidance on:
 - Starting a recording
 - Using the session checklist during recording
 - Viewing the real-time feedback as checklist items are completed
 - Stopping and saving a recording
- Focus exclusively on their specific part of the patient journey (e.g., Intake and Arrival for Receptionists)
- Practice session with a sample scenario relevant to their role

3. Dashboard Orientation

- Guided tour of the main dashboard features relevant to their role
- Calendar view walkthrough:
 - Explanation of color-coding system
 - How to interpret appointment statuses
 - Filtering by specialists they typically work with
- Patient management tutorial:
 - Adding new patient activity
 - Rescheduling patient appointments/activities
 - Updating patient information
- Managing unassigned recordings:
 - How to identify recordings that need to be assigned
 - Process for associating recordings with patient appointments
 - Importance of clearing unassigned recordings daily

Growth Partner Onboarding

Focused on relationship management capabilities:

1. Referring Doctor Import and Management

- Similar to the Admin/Specialist process for importing referring doctors
- Additional training on:
 - Categorizing referring doctors (Core, Premier, Community)
 - Setting up referral type criteria
 - Bulk updating referring doctor information
 - Database maintenance best practices

2. Referring Doctor Profile Setup

- Comprehensive tutorial on managing doctor profiles:
 - Adding contact information and practice details
 - Recording personal preferences and interests
 - Documenting communication preferences
 - Setting referring doctor goals and strategies
- Guidance on building memory profiles:
 - Capturing personal details that strengthen relationships
 - Recording conversation topics for future reference
 - Noting key dates (birthdays, practice anniversaries)
 - Tracking preferred case types and clinical interests

3. Relationship Dashboard Orientation

- In-depth tour of analytics and relationship management tools:
 - Understanding the relationship health score
 - Interpreting referral patterns and trends
 - Analyzing case acceptance rates by referring doctor
 - Identifying opportunities for growth
- Tutorial on setting up:
 - Visit schedules
 - Recurring events
 - Engagement tracking
 - Goal setting by referring doctor

4. Visit and Event Management Training

- Detailed walkthrough of the visit and event system:

- Creating different types of engagement events
- Scheduling follow-up activities
- Documenting visit outcomes
- Measuring engagement effectiveness
- How to record visit notes:
 - Using voice memos for quick documentation
 - Structured formats for visit summaries
 - Tagging important topics and action items
 - Setting up follow-up tasks

5. Referral Analytics Interpretation

- Training on using data to drive decision-making:
 - Identifying high-value referring doctors
 - Spotting declining referral patterns
 - Understanding case mix and opportunities
 - Developing data-driven engagement strategies
- Creating and interpreting reports:
 - Custom date range analysis
 - Comparing referring doctor performance
 - Tracking growth over time
 - Sharing insights with the practice team

Enforced Guided Tour Mechanics

For all roles, the onboarding includes an enforced guided tour that prevents skipping crucial steps:

1. Highlighting and Focus Control:

- The system dims the rest of the interface and highlights only the relevant section
- Users must click “Next” to proceed to the next highlighted element
- Attempting to click elsewhere is either prevented or triggers a reminder

2. AI Assistant Integration:

- During the tour, an AI assistant (voice or text) explains each feature
- Users can mute the voice and read transcripts if preferred
- Users can ask questions to the AI about the current step

3. Progress Tracking:

- A progress bar shows completion percentage through the onboarding
- Users can pause onboarding and resume later, but cannot access full functionality until completed

4. **Certification upon Completion:**

- After completing onboarding, users receive a “Basic Training Certificate”
 - This certificate is displayed in their profile and contributes to gamification elements
-

5. Clinical Note Taker Module

Main Dashboard

The Clinical Note Taker Dashboard serves as the primary command center for daily operations and includes:

1. **Global Controls:**

- **Date Selector:** Calendar has a bar to select the viewing date (defaults to current date)
- **Specialist Filter:** Dropdown to filter the view by specific specialists
- **Notification Bell:** Displays alert count and provides access to notification center
- **Add Patient Button:** Opens form to add new patient appointments
- **Templates Library Button:** Direct navigation to template management

2. **Layout:**

- Split-screen design with Unassigned Recordings section at the top
- Patient Activity Calendar as the main view
- Tab navigation for Letters, Referring Doctors, and Find Patients at the bottom

Unassigned Recordings Section

Shows recordings that haven't been linked to patient appointments:

1. **Visual Display:**

- Recordings arranged horizontally with the most recent on the left
- Each recording shows timestamp, duration, and the name of the person who made it and a title based upon the discussion it contained

- Play button to listen to the recording, Assign appointment button to resolve the issue

2. Actions:

- **Assign to Patient:** Links the recording to an existing patient appointment
- **Create New Appointment:** Creates a new appointment and attaches the recording
- **View All:** Takes user to Notes screen filtered to show all unassigned recordings

3. Gamification Element:

- The system tracks consecutive days where users clear all unassigned recordings
- Achievement badges awarded for maintaining “zero unassigned recordings” streaks

Patient Activity Calendar

The central workspace displaying all appointments:

1. Layout:

- Timeline view with hours (9am-5pm) on the left axis
- Specialist columns across the top (filterable)
- Appointment cards positioned according to scheduled time
- Ability to expand to full-screen mode

2. Appointment Card Color-Coding:

- **Purple:** New patient consultation
- **Blue:** Default/other treatments (not new consultations)
- **Gray:** No recordings or data recorded
- **Golden:** All required data collected
- **Orange:** Missing data from recordings
- **Green:** Letters generated and ready to send
- **Dark Green:** Letters sent

3. Appointment Card Features:

- Patient name and appointment type
- Time duration
- Record button appears on hover if no recording exists
- Progress indicator for appointments with partial recordings (using color code)
- Click to navigate to detailed patient view

4. Actions:

- **Add Appointment:** Opens form with fields:
 - Patient Name (searchable, creates new if not found)
 - Referring Doctor (searchable, creates new if not found)
 - Treatment date and time slot
 - Specialist assignment
 - Treatment/Case Types (multiple selection, optional)
- **Quick Record:** Start recording directly from an appointment card
- **Reassign:** Move appointment between specialists

Dashboard Tabs

1. Letters Tab

- Displays a comprehensive list of all generated letters
- Table columns:
 - Letter Type (Referrer, Patient, Clinical Note)
 - Patient Name
 - Referring Doctor
 - Subject
 - Generation Date
 - Status (Needs Review, Ready to Send, Sent)
 - Action buttons
- Functionality:
 - Clicking on a letter navigates to the patient's note screen with that letter selected
 - Clicking on a referring doctor navigates to the individual referring doctor screen
 - Clicking on a patient navigates to the patient screen with latest appointment selected
 - Clicking on the recording icon opens a playback popup
- Filtering and sorting:
 - Filter by status, letter type, referring doctor, patient
 - Filter by date range (last recording date, first recording date)
 - Sort by any column (ascending/descending)

2. Referring Doctors Tab

- Displays a table of all referring doctors with key performance metrics
- Table columns:
 - Referring Doctor Name (with practice name)
 - Relationship Health Score (out of 100)
 - Number of Referrals

- Acceptance Rate
- Additional customizable columns
- Actions:
 - Click on doctor name to navigate to individual referring doctor screen
 - Add New Referring Doctor button
 - Bulk Import Referring Doctors button
 - Export List button (CSV, Excel)
 - Review Detailed Report button (navigates to Referring Doctor Insights Dashboard)
- Customization:
 - Column selector to choose which metrics to display
 - Filter controls for each column
 - Savable filter presets

3. Find Patients Tab

- A searchable directory of all patients in the system
- Table columns:
 - Patient Name (with ID number)
 - Contact Information (Phone, Email)
 - Last Visit Date
 - Next Appointment Date
 - Current Treatment/Case Type
- Functionality:
 - Click on patient name to navigate to patient profile
 - Quick-action buttons for common tasks (call, email, schedule)
- Filters:
 - By patient name
 - By visit date range
 - By appointment date range
 - By treatment/case type

Patient Profile Screen

The comprehensive view of an individual patient's history and documentation:

1. Left Panel - Patient Overview:

- Patient name and contact information (phone, email)
- "Add" buttons appear instead of labels for missing information
- Current treatment summary
- Total appointments count

- Appointment list with tabs:
 - All
 - Recent
 - Scheduled

2. Main Panel - Appointment Detail:

- Default view shows most recent appointment
- Appointment information section:
 - Title and date
 - Specialist assigned
 - Referring doctor (with “Add” button if missing)
- Content tabs:
 - **Transcript:** Full recording playback with transcript text
 - Multiple recordings can be attached to one appointment
 - Playback speed controls (1x, 1.5x, 2x)
 - Transcript text with speaker identification
 - **AI Summary:** Two-part summary view:
 - “Overall Patient Summary” - aggregated history across all visits
 - “Recording Summary” - specific to selected recording
 - **Referring Doctor Letter:** If selected during onboarding, editable letter with formatting:
 - Gold text: Information extracted from recording (required)
 - Blue text: Optional information from recording
 - Black text: Static template text
 - **Patient Letter:** If selected during onboarding, similar format to referring doctor letter
 - **Clinical Note:** If selected during onboarding, medical documentation with same formatting scheme

3. Right Panel - Actions:

- Export (PDF, Word)
- Share (secure email link)
- Print
- Template editing mode toggle
- AI assistance for completing missing information

4. Template Editing Features:

- When template editing mode is enabled:
 - Text can be directly edited
 - Highlighting text reveals formatting options:
 - Basic formatting (bold, italic, underline)

- Paragraph styles (heading, subheading, bullet list)
- Special marking (required field, conditional field, static text)
- Changes can be saved to create a new custom template
- Templates can be associated with specific appointment types

5. **Recording and Status Management:**

- System automatically tracks what information has been captured in recordings
- Alerts appear if required information is missing 2 hours after the appointment time
- Notifications remind users to review recordings with missing data
- Multiple recordings can be associated with a single appointment

6. **Letter and Note Management:**

- Document actions available for all document types:
 - Export (PDF, Word formats)
 - Print
 - Share (secure email)
 - Edit
- Template-specific actions:
 - “Save as New Template”
 - “Update Template”
 - “Use Different Template”
- AI assistance throughout the letter editing process
- Changes can be saved as a new template or update an existing one

7. **Information Extraction and Display:**

- Color-coding system for information:
 - Gold: Required information extracted from recordings
 - Blue: Optional information from recordings
 - Black: Static template text
- Missing information alerts with options to:
 - Record additional information
 - Use AI to fill with likely information
 - Manually enter the information
 - Mark as not applicable

Live Recording Experience

The interface during active recording sessions:

1. Recording Controls:

- Pause/Resume button
- Cancel button (with confirmation dialog)
- Progress timer
- Audio level indicator

2. Session Checklist Panel:

- Dynamic list of items to cover during the session
- Items automatically check off as AI detects the topic has been discussed
- Color-coding to indicate different stage in the wheel

3. Patient Journey Wheel:

- Visual representation of the seven patient journey stages
- Current stage is highlighted and session checklist shown based upon expectations from that role given specialist is also attached to that patient (prone to edge cases)
- Click on a stage to see associated checklist items
- Click on a role (e.g., “Receptionist”) to filter checklist to that role’s responsibilities
- Wheel can be collapsed, but remains open by default during onboarding phase (first 10 letters)

4. AI Guide Section:

- Shows contextual hints about what to discuss next
- Provides suggestions based on practice patterns
- Updates in real-time as the session progresses

End-of-Day Summary

An automatic popup that appears at the end of the business day:

1. Daily Statistics:

- Number of patients seen
- Number of recordings made
- Number of letters generated
- Acceptance rate recorded

2. Pending Actions:

- Missing referring doctor letters
- Incomplete clinical notes

- Patient letters not sent
- Unassigned recordings
- 3. **Tomorrow's Preparation:**
 - Upcoming patients requiring prep
 - Missing records needed before appointments
 - Scheduled visits with referring doctors

4. **Actions:**

- Print summary
 - Dismiss (appears in notification bar for later access)
 - Quick-action buttons for high-priority pending items
-

6. Templates Management

Templates Library

The central hub for managing all document templates with three main sections:

1. **Master Templates:**

- Professionally designed templates provided by The Leadership Thread
- Read-only, cannot be directly edited
- Can be cloned for customization
- Available templates include:
 - Referring Doctor Letter templates (various specialties)
 - Patient Letter templates
 - Clinical Note templates

2. **My Templates:**

- User's personal template library
- Custom-created templates
- Modified versions of master templates
- Filter by template type, creation date, and usage frequency

3. **Team Templates:**

- Templates shared within the practice team
- Not publicly shared outside the practice
- Organized by specialty and document type

- Permission controls determine who can use vs. edit

Master Templates

Each master template includes:

1. Viewing Interface:

- Template preview with sample content
- Color-coded text elements:
 - Gold: Required information extracted from recordings
 - Blue: Optional information from recordings
 - Black: Static text (remains the same in all documents)
- Sectional breakdown with explanatory notes

2. Actions:

- “Mark as Default” button: Sets as default template for its type
- “Clone to Customize” button: Creates an editable copy
- “Preview with Patient” button: Tests template with actual patient data. During Onboarding, just example letter generated by system is provided for training. “Preview with Patient” button is hidden

3. Metadata Display:

- Creator information (for The Leadership Thread templates)
- Last updated date
- Suitable specialties

My Templates

User-created or customized templates with additional controls:

1. Template List View:

- Thumbnail preview
- Template name
- Creation/modification date
- Usage count
- Default status indicator

2. Template Detail View:

- Full preview
- Edit button

- Set as Default toggle
- Share with Team option
- Delete button

Team Templates

Templates shared within the practice (no public community sharing):

1. Browse Interface:

- Featured templates section
- Category filters (specialty, document type)
- Search functionality
- Sort options (newest, most used)

2. Template Cards:

- Preview thumbnail
- Template name and type
- Creator information
- Usage statistics
- “Use Template” button
- “Clone to My Templates” button (if permissions allow)

3. Permissions:

- Templates can be marked for visibility to:
 - Personal (only visible to creator)
 - Team (visible to all practice users)
- Edit permissions can be restricted to:
 - Creator only
 - Selected team members
 - All team members

Template Creation and Editing Flow

The step-by-step process for creating a new template:

1. Initiation:

- Click “New Template” button
- Select template type:
 - Referring Doctor Letter
 - Patient Letter

- Clinical Note

2. **Base Configuration:**

- Template name and description
- Select tone (Professional, Friendly, Empathetic, or custom)
- Provide example content or select a starting point:
 - Upload example document
 - Based on master template (if example document not provided)

3. **Custom Instructions:**

- Optional AI guidance field
- Special considerations or requirements
- Keywords to emphasize or avoid

4. **Template Editor:**

- Rich text editing interface with formatting toolbar:
 - Basic formatting (bold, italic, underline)
 - Paragraph styles (headings, subheadings)
 - Lists (bullet, numbered)
 - Special formatting (required field, conditional field)
- Components library on the right side:
 - Drag-and-drop sections (e.g., greeting, treatment summary, follow-up)
 - Dynamic fields (e.g., patient name, referring doctor, treatment details) (gold)
 - Conditional blocks (shown only when specific criteria are met) (blue)
- AI Assistant panel for suggestions and help

5. **Text Highlighting Options:**

- When text is highlighted, a contextual menu appears with options:
 - Formatting options
 - Mark as required field (gold)
 - Mark as conditional field (blue)
 - Mark as static text (black)
 - Ask AI to optimize or suggest alternatives
 - Voice command option

6. **Auto-saving:**

- Automatic saving during editing
- Undo/redo functionality

7. **Completion:**

- “Save Draft” option
- “Finalize Template” button
- Option to set as default for specific appointment types
- Visibility settings (My Templates or Team Templates)

Template Preview and Testing

Testing functionality for templates before finalization:

1. Patient Selection:

- Choose a test patient from a calendar or list view
- Select a specific appointment/recording
- Option to use AI-generated sample data

2. Preview Generation:

- System processes the template with selected patient data
- Shows how dynamic fields will populate
- Highlights any missing required information

3. Review Interface:

- Side-by-side comparison of template and generated document
- Warning indicators for potential issues
- Suggestions for improvement

4. Refinement:

- Direct editing capability from preview mode
- Regenerate preview after changes
- AI suggestions for optimization

7. Memory Management

Dictionary Management

A system for training the AI on practice-specific terminology:

1. Word and Phrase Management:

- Two-column interface:

- “Heard /Seen” column: How the word might be incorrectly transcribed
 - “Correct As” column: The proper spelling/terminology
 - Quick correction in letter edit screen
2. **Practice-Wide vs. Personal Dictionaries:**
- Users with permissions can create practice-wide dictionary entries
 - Individual users can create personal dictionary entries
 - Toggle to control which dictionary is active
3. **Scope Controls:**
- Option to add to “Practice Dictionary” (available to all)
 - Option to add to “My Dictionary” (personal use only)
 - Option to submit to “Global Dictionary” (for system improvements)

Treatment and Case Types Configuration

Comprehensive catalog of treatments (Case Types) offered by the practice:

1. **Treatment and Case Type Management Interface:**
- List view of all configured treatments
 - Add, edit, and delete functionality
 - Bulk import/export options
2. **Treatment Detail Form:**
- Treatment name (e.g., “Dental Implant”)
 - Category (e.g., “Surgical”, “Restorative”)
 - Case Type (Common synonyms or alternate terms)
 - Associated codes (procedure codes, billing codes)
 - Average duration
 - Default fee range (optional)
 - Required follow-ups
3. **Treatment Identification Logic:**
- AI training section to help system identify treatment discussions
 - Sample phrases that indicate specific treatments
 - Common questions patients ask about each treatment
4. **Treatment Analytics Integration:**
- Flag for inclusion in analytics reporting
 - KPI assignment (e.g., high-value treatment, bread-and-butter service)

- Conversion goal settings
-

8. Relationship Management Module

Relationship Dashboard

The central hub for Growth Partners to manage referring doctor relationships:

1. Analytics Overview:

- Impact metrics showing how visits and events correlate with referral growth
- Charts displaying visit frequency vs. referral volume
- Event type effectiveness comparison
- Growth trend visualization

2. Calendar View:

- Monthly/weekly/daily toggle views
- Color-coded events by type:
 - Office visits
 - Lunch and learns
 - Study clubs
 - Follow-up calls
 - Birthday/anniversary acknowledgments
- Recurring event indicators
- Conflict warnings for overlapping events

3. Task Management:

- Upcoming tasks list with priority indicators
- Assignment information (which team member is responsible)
- Due dates and reminders
- Completion status tracking
- Filter by Growth Partner, task type, or referring doctor

4. Quick Actions:

- “Create Event” button with event type selection
- “Schedule Visit” button with referring doctor selection
- “Add Task” button with assignment options
- Global filter for Growth Partner view

Referring Doctor Insights Dashboard

The comprehensive analytics dashboard for all referring doctor relationships:

1. Key Drivers of Growth Section:

- Four primary KPI metrics displayed prominently:
 - **New Patients:** Total count of new patients acquired through referrals with trend indicator
 - **Average Patient Value:** The mean revenue generated per referred patient with comparison to previous periods
 - **Total Case Value:** Aggregate monetary value of all cases referred with trend visualization
 - **Accepted Value:** The dollar amount of cases that have been accepted by patients
- Time period selector with options:
 - Last 30 days (default)
 - Last 90 days
 - Last 12 months
 - Custom date range
- Each metric includes:
 - Current value
 - Previous period comparison
 - Trend visualization
 - Filtering capability by specialist or location

2. Top Referral Sources Visualization:

- Bar chart showing top referring sources ranked by volume
- Dual-axis presentation:
 - Left axis: Number of patients referred (bars)
 - Right axis: Total value generated (line or secondary bars)
- Sources include both individual referring doctors and an “Independent Sources” category
 - Independent sources represent approximately 10% of total referrals (walk-ins, website inquiries, etc.)
- Interactive elements:
 - Hover for detailed metrics
 - Click on doctor name to navigate to individual doctor profile
- Filterable by date range, specialty, and case type

3. Overall Relationship Health Meter:

PROMPT ADVISERS

- Aggregate relationship health score displayed on a 0-100 scale
- Score calculated only for referring doctors (independent sources excluded)
- Visual representation:
 - Color-coded gauge (red/yellow/green)
 - Historical trend line showing score movement over time
- Customizable calculation factors with adjustable weights:
 - Referral volume (quantity of referrals)
 - Referral value (monetary amount)
 - Referral consistency (regular cadence vs. sporadic)
 - Case acceptance rate
 - Growth trend (increasing or decreasing)
- Information icon with tooltip explaining the calculation methodology
- Option to recalibrate the weighting formula to align with practice priorities

4. Referring Doctor Ranking Table:

- Comprehensive table listing all referring doctors with performance metrics
- Default columns:
 - **Referring Doctor Name:** Full name with credentials
 - **Relationship Score:** Individual score out of 100
 - **Case Completion:** Percentage of referred cases completed
 - **Referrals:** Raw count of patients referred
 - **Patient Value:** Average revenue per patient
 - **Referred Value:** Total value of all referrals
 - **Recent Referral Date:** Date of most recent referral
- Customization options:
 - Column selector to add/remove metrics
 - Sort by any column (ascending/descending)
 - Filter by any value (e.g., only doctors with >80 relationship score)
 - Save custom views
- Actions:
 - Click on doctor name to navigate to individual profile
 - Export table as CSV or Excel
 - Bulk actions for selected doctors

5. Treatment Conversion Analysis Funnel:

- Visual funnel representation of the patient journey with five stages:
 - **Appointments Scheduled:** Initial bookings
 - **Patients Seen:** Actual attendance
 - **Treatment Presented:** Cases where treatment was proposed
 - **Treatment Accepted:** Patient agreed to proceed
 - **Treatment Completed:** Finished procedures

- Each stage displays:
 - Absolute count
 - Percentage of previous stage
 - Drop-off visualization
- Interactive elements:
 - Click on funnel segment to filter patient list below
 - Hover for conversion metrics
- Patient table below funnel:
 - Updates based on funnel segment selection
 - Shows patients at the selected journey stage
 - Includes patient details and relevant metrics
 - Quick-action buttons for follow-up
- Filter controls for:
 - Referring doctor
 - Treatment types
 - Date range

6. Treatment Opportunity Insights:

- “When Patients Say No” analysis section:
 - Visual breakdown of when patients decline in the journey
 - Bar chart of top decline reasons:
 - Cost concerns
 - Time commitment
 - Fear/anxiety
 - Insurance coverage issues
 - Treatment perception
 - Dental benefits
 - System collects these reasons in an aggregated fashion from recordings
- AI-generated recommendations to improve conversion:
 - Based on practice-specific data patterns
 - Tailored suggestions for addressing common objections
 - Actionable tactics with expected impact estimates

7. Journey Bottlenecks Analysis:

- Analytical cards highlighting key performance issues:
 - Comparison to industry benchmarks
 - Schedule efficiency metrics
 - Patient cancellation patterns
 - Average value compared to targets
- Each bottleneck includes:
 - Issue description

- Severity rating
- Trend indication (improving/worsening)
- Suggested action steps

8. Engagement Opportunities Section:

- Strategic outreach recommendations focused on referring doctors:
 - New doctor welcome initiatives
 - Referring anniversaries approaching
 - Birthdays and special occasions
 - Declining referral patterns needing attention
 - Educational events targeting specific groups
- Calendar view of upcoming engagement opportunities
- One-click scheduling for visits or events

Single Referring Doctor Screen

A comprehensive view of an individual referring doctor with analytics and management capabilities:

Analytics View

1. Doctor Profile Header:

- Doctor name with credentials and specialty
- Practice name and location
- Contact information (email, phone)
- Last referral date with count indicator
- Last visit date by Growth Partner
- Quick action buttons:
 - Call
 - Email
 - Schedule visit
 - View full profile

2. Relationship Health Section:

- Individual health score prominently displayed (out of 100)
- Status indicator showing:
 - Active: Regular referrals within defined timeframe
 - Inactive: No referrals within configured timeframe (default 90 days)
 - Status is configurable in settings
- Referral frequency analysis:

- Pattern identification (weekly, bi-weekly, monthly)
 - Consistency scoring
 - Trend visualization
 - Category designation:
 - Premier: Top-tier referrers
 - Core: Regular referrers
 - Community: Occasional referrers
 - Partner level badge with tier visualization
3. **Procedure/Case Type Snapshot:**
- Detailed breakdown of referred case types in table format:
 - **Case Type Column:** Categories of dental procedures
 - **Number of Cases:** Raw count of each case type
 - **Total Case Value:** Monetary value of all cases
 - **Number of Accepted Cases:** How many proceeded to treatment
 - **Total Accepted Case Value:** Revenue from accepted cases
 - **Case Acceptance Percentage:** Conversion rate with visual bar representation
 - Interactive elements:
 - Sort by any column
 - Filter for specific time periods
 - Highlight highest/lowest performing categories
4. **Growth Drivers Analysis:**
- Historical trend graphs showing:
 - New patients referred over time
 - Average patient value progression
 - Treatment presentation rates
 - Acceptance rates by case type
 - Year-over-year comparison
 - Goal tracking against targets
 - Opportunity identification for growth
5. **Doctor-Specific Treatment Funnel:**
- Same 5-stage funnel as the overall dashboard but filtered to show only this doctor's referrals:
 - Appointments Scheduled
 - Patients Seen
 - Treatment Presented
 - Treatment Accepted
 - Treatment Completed

- Patient-level detail table appearing below the funnel
- Filter controls for case type and date range

6. Guided Goals Section:

- Goal selector dropdown with strategic options:
 - Expand case mix: Diversify types of referrals
 - Increase referral frequency: Boost regular referrals
 - Grow average patient value: Focus on higher-value cases
 - Deepen community connection: Strengthen relationship
- AI-generated strategy suggestions based on selected goal:
 - Tailored to the specific referring doctor's patterns
 - Considering their history and preferences
 - Including practice-proven tactics
- Recent engagement history timeline:
 - Chronological display of past interactions
 - Effectiveness indicators
 - Outcome tracking

Referring Doctor Profile Management

Interface for managing comprehensive referring doctor information:

1. Main Tabs:

- Preferences
- Notes
- Events
- Visits
- Tasks

2. Preferences Sub-tabs:

- **Contact Information:**
 - Name, credentials, specialty
 - Phone numbers (office, mobile, preferred)
 - Email addresses (work, personal)
 - Best contact times
- **Office Details:**
 - Practice address
 - Office hours
 - Staff contacts (office manager, assistant)
 - Parking/access notes
- **Personal Details:**

- Birthday
 - Interests and hobbies
 - Alma mater
 - Family information (if appropriate)
 - Meeting preferences
 - **Letter Preferences:**
 - Preferred communication frequency
 - Detail level preference (brief vs. comprehensive)
 - Special formatting requests
 - Delivery method preference
 - **Professional Networks:**
 - Associations and memberships
 - Study clubs
 - Teaching positions
 - Publication interests
 - **Team Assignments:**
 - Primary Growth Partner
 - Backup Growth Partner
 - Specialist preference
3. **Notes Tab:**
- Chronological history of interaction notes
 - Rich text formatting
 - Ability to tag specific topics
 - AI analysis of sentiment and key topics
 - Search and filter capabilities
4. **Voice Memo Integration:**
- Record voice notes after visits
 - AI transcription and summary
 - Automatic extraction of action items
 - Integration with task management

Referring Doctor Memory Profiles

Detailed profiles for each referring doctor beyond basic contact information:

1. **Personal Details Management:**
- Professional background
 - Practice specialties and focus areas
 - Personal interests (e.g., “Enjoys golfing”, “Fan of classical music”)

- Important dates (birthday, practice anniversary)
- Preferred contact methods and times
- Communication style preferences

2. Relationship Parameters:

- Preferred letter formats and frequency
- Interest level in patient progress (regular updates vs. final outcome only)
- Preferred case types for referral
- Special instructions for handling their patients

3. Memory Attachment:

- Notes section for recording important conversation topics
- Visit history with interactive timeline
- AI-assisted summary of relationship history
- Photo upload capability

4. Accessibility:

- Available during recording sessions as contextual information
- Integrated into letter generation process
- Accessible to Growth Partners for relationship management
- Searchable by specific attributes

Visit and Event Management

System for planning and tracking engagement activities:

1. Visit Types:

- New office visit
- Lunch and learn
- New patient follow-up visit
- Complex case planning visit
- Educational event
- Social engagement

2. Visit Planning Form:

- Visit type selector
- Referring doctor selection (single or group)
- Date and time picker
- Duration estimator
- Objective setting

- Pre-visit checklist
- Materials needed list
- Talking points preparation
- 3. **Visit Documentation:**
 - Record visit outcomes
 - Voice memo capability with transcription
 - Structured feedback form:
 - Topics discussed
 - Concerns raised
 - Opportunities identified
 - Next steps agreed upon
 - Follow-up task assignment
- 4. **Engagement Analytics:**
 - Visit frequency tracking
 - Correlation between visits and referral patterns
 - Event ROI calculations
 - Engagement opportunity suggestions

Relationship Health Calculation

The methodology for calculating the crucial relationship health scores:

1. **Individual Doctor Relationship Score Components:**
 - **Referral Volume (Quantity):**
 - Raw number of referrals compared to practice average
 - Weighting adjustable in settings (default 25%)
 - **Referral Value (Quality):**
 - Average and total monetary value of referrals
 - Weighting adjustable in settings (default 25%)
 - **Referral Consistency:**
 - Pattern and predictability of referrals
 - Standard deviation from expected frequency
 - Weighting adjustable in settings (default 15%)
 - **Case Acceptance Rate:**
 - Percentage of referred patients who accept treatment
 - Comparison to practice average
 - Weighting adjustable in settings (default 15%)
 - **Growth Trend:**

- Direction and rate of change in referral patterns
- Year-over-year growth calculation
- Weighting adjustable in settings (default 20%)

2. Scoring Normalization:

- Each component is scored on a scale of 0-100
- Relative scoring compares to:
 - Practice historical performance
 - Similar referring doctors
 - Industry benchmarks
- Weighted average creates final score
- Score recalculation frequency:
 - Real-time for direct referral activities
 - Daily for trend analysis
 - Weekly for comprehensive recalibration

3. Active/Inactive Status Logic:

- Configurable timeframe for inactivity classification
- [Default setting: Inactive after 90 days without referral](#)
- Automatic status change with notification
- Re-activation triggers

4. Aggregate Practice Relationship Health:

- Weighted average of all individual referring doctor scores
 - Weighting based on:
 - Referral volume
 - Doctor category (Premier, Core, Community)
 - Strategic importance
 - Independent sources excluded from calculation
 - Trending analysis over time
-

9. Patient Journey Framework

The Seven Stages Model

The platform is built around a structured patient journey framework consisting of seven distinct phases:

1. Phase 1: Front Office

- **Intake (formerly “Call”):**
 - Performed by: Front Office Team
 - Purpose: Creating connection from the first hello
 - Essential Data: Patient’s full name, referring doctor’s name, reason for referral, main goals or expectations
 - Philosophy: “We don’t just collect information — we create connection from the first hello.”
- **Arrival (formerly “Prepare”):**
 - Performed by: Front Office Team
 - Purpose: Welcoming patients into an experience
 - Essential Actions: Greet patient warmly by name, acknowledge and honor the referral by mentioning the referring doctor
 - Philosophy: “We don’t just check them in — we welcome them into an experience.”

2. Phase 2: Treatment Consultant + Specialist

- **Exam:**
 - Performed by: Treatment Consultant
 - Purpose: Honoring the handoff as part of the journey
 - Essential Data: Confirm understood purpose of visit, ask permission to take records, reinforce the value of records
 - Philosophy: “We don’t just hand them off — we honor the handoff as part of their journey.”
- **Treatment Planning:**
 - Performed by: Treatment Consultant
 - Purpose: Learning what truly matters to the patient
 - Essential Data: Patient’s main goals, goals shared with referring dentist, priorities for smile and long-term health
 - Philosophy: “We don’t just talk treatment — we learn what truly matters to the patient.”
- **Case Acceptance:**
 - Performed by: Specialist
 - Purpose: Building confidence to move forward

PROMPT ADVISERS

- Essential Data: Present treatment plan, get verbal confirmation, outline appointments, review financial commitment
- Philosophy: “We don’t just review plans — we build confidence to move forward.”

3. Phase 3: Joint Effort

- **Treatment/Procedure:**

- Performed by: Specialist and Clinical Team
- Purpose: Delivering exceptional clinical care
- Essential Data: Treatment notes, procedure details, patient experience, follow-up requirements
- Philosophy: “We don’t just perform procedures — we deliver transformative care experiences.”

- **Follow-Up:**

- Performed by: Treatment Consultant & Front Office Team
- Purpose: Staying in relationship with intention
- Essential Data: Confirm appointments scheduled, note concerns or barriers, referring doctor letter sent
- Philosophy: “We don’t just follow up — we stay in relationship, with intention and care.”

Wheel of Responsibility Configuration

The system for assigning team roles to patient journey stages:

1. Wheel Interface:

- Visual circular representation of the seven stages
- Color-coded sections for each stage
- Role assignments displayed within each section
- Interactive clicking to expand stage details

2. Configuration Controls:

- Practice-wide defaults set by Admin
- Specialist-level customization option
- Role assignment dropdowns for each stage
- Multiple roles can be assigned to a single stage
- Primary responsibility designation option

3. Flexibility Settings:

- “Strict” mode: Enforces clear role boundaries
- “Flexible” mode: Allows role overlap and backup coverage
- Custom configurations for unique practice workflows

4. Visibility Rules:

- Determines which checklist items appear for which roles
- Controls recording guidance based on assigned responsibilities
- Influences analytical grouping of metrics

Session Checklist Generation Logic

The system for creating dynamic, context-aware checklist items:

1. Checklist Sources:

- Base items derived from the Seven Stages Model
- Template variable requirements (data needed for letter generation)
- Financial information requirements
- Treatment-specific requirements
- Practice custom additions

2. Checklist Item Types:

- Required items (must be covered for letter generation)
- Recommended items (best practice but optional)
- Financial items (conditionally displayed based on role configuration)
- Treatment-specific items (dynamically added based on appointment type)

3. Contextual Adaptation:

- Patient journey stage detection
- Role-based filtering
- Treatment type consideration
- Previous visit history incorporation
- Follow-up requirement inclusion

4. AI-Assisted Generation:

- Analysis of patient history for relevant questions
- Incorporation of referring doctor preferences
- Dynamic addition of items based on conversation flow
- Automatic removal of covered topics

10. Technical Specifications & System-Wide Logic

AI Functionality and Logic

The platform's AI operates on several levels:

1. **Speech-to-Text Engine:**

- Real-time transcription of audio recordings
- Speaker identification capabilities
- Medical and dental terminology optimization
- Adaptation to individual speaker patterns over time

2. **Natural Language Processing (NLP):**

- **Entity Recognition:** Identifies key entities like patient names, referring doctor names, dates, treatment types
- **Intent Recognition:** Understands the purpose of different parts of the conversation
- **Checklist Mapping:** Connects conversation topics to checklist items
- **Sentiment Analysis:** Gauges patient comfort, concerns, and engagement
- **Summarization:** Condenses transcripts into structured summaries

3. **Template Population Logic:**

- Extracts relevant information from transcripts based on template requirements
- Keep track of phrases coming from required components vs conditional
- Flags missing required information
- Applies appropriate formatting to different information types
- Maintains consistency across related documents

4. **Recommendation Engine:**

- Analyzes patterns in patient acceptance/decline decisions
- Identifies effective communication approaches
- Suggests engagement strategies for referring doctors
- Highlights potential journey bottlenecks
- Recommends process improvements

Color-Coding System

Consistent color scheme throughout the platform for status indication:

1. Patient Activity Calendar Colors:

- **Purple:** New patient consultation
- **Blue:** Default/other treatments (not new consultations)
- **Gray:** No recordings or data recorded (after 2-hour system variable timeout)
- **Golden:** All required data collected
- **Orange:** Missing data from recordings
- **Green:** Letters generated and ready for review/send
- **Dark Green:** Letters reviewed and sent

2. Document Text Colors:

- **Gold:** Required information extracted from recordings
- **Blue:** Optional/conditional information from recordings
- **Black:** Static template text that remains unchanged

3. Analytics Color Scheme:

- **Green:** Positive trends, above-target metrics
- **Yellow:** Neutral or at-target metrics
- **Red:** Negative trends, below-target metrics
- **Gray:** Insufficient data for comparison

Notification System

Comprehensive alert system to ensure workflow completion:

1. Notification Types:

- **Missing Data:** Recording processed but required information missing
- **Letter Review:** New letter generated and awaiting review
- **Unassigned Recording:** Recording not linked to a patient appointment
- **Task Due:** Assigned task approaching deadline
- **Visit Reminder:** Upcoming referring doctor visit
- **End of Day Summary:** Daily wrap-up of activities and pending items

2. Delivery Methods:

- Email alerts (configurable)
- Dashboard persistent alerts

3. Priority Levels:

- **Critical:** Requires immediate attention (e.g., missing data for today's patient)
- **Important:** Should be addressed today (e.g., letter awaiting review)
- **Informational:** For awareness (e.g., weekly statistics summary)

4. Action Options:

- Direct link to relevant screen
- Quick-action buttons (e.g., “Review”, “Assign”, “Complete”)
- Snooze options (15min, 1hr, End of Day)
- Dismiss with optional reason

Gamification and User Engagement

System to encourage consistent platform usage and best practices:

1. Streak System:

- Daily “Clear Unassigned Recordings” streak counter
- Visual indicators of current streak
- Milestone achievements at specific streak counts
- Team-wide leaderboards

2. Badges and Achievements:

- **Basic Badge:** Awarded after generating 10 letters
- **Advanced User Badge:** Awarded after creating custom templates
- **Perfect Week:** No unassigned recordings for 5 consecutive days
- **Template Master:** Created templates used by multiple team members
- **Documentation Champion:** Consistently complete notes within 1 hour of appointment

3. Progression System:

- Three user levels: Beginner, Intermediate, Advanced
- Feature unlocks tied to progression
- Certification for level completion
- Practice-wide recognition

4. Engagement Mechanics:

- Weekly usage statistics
- Comparison to personal bests
- Team contribution metrics
- Positive reinforcement messaging

Security and Data Retention Policies

Comprehensive data management with HIPAA compliance:

1. Data Categories:

- **Original Recordings:** The raw audio files of sessions (with auto deletion)
- **Transcripts:** Full text transcriptions of recordings (with auto deletion)
- **AI Summaries:** Condensed, structured summaries generated by AI
- **Generated Documents:** Letters and clinical notes created from data
- **Analytics Data:** performance metrics
- **Management Data:** Appointments, Patients, Treatments, Permissions, Referring Doctors, Preferences and all other platform/operation specific data

2. Retention Rules:

- Practice-configurable retention period for raw recordings and transcripts
- Default: 90-day retention for raw recordings and transcripts
- Permanent retention of AI summaries and generated documents
- Automatic deletion process with confirmation notifications
- Manual deletion override option for Admins

3. Security Measures:

- End-to-end encryption for all data
- Role-based access controls
- Audit logging of all data access
- Two-factor authentication option
- HIPAA-compliant data handling procedures

4. Export and Backup:

- Practice-wide data export functionality
- Automatic backup of AI summaries and documents
- Secure document sharing with encryption
- Archival options for long-term storage

System Dependencies and Integrations

- Permission structure from existing team setup page
- Retrieving Practice and Doctor Information: During the onboarding of a new practice, the system needs to retrieve information about the practice and its doctors from the existing application. This is necessary to determine which specialties (e.g., periodontist, endodontist, oral surgeon) are present in the practice, which then influences the setup of the practice workflow.
- User Profile and Preferences Management: The platform needs to update or create a profile in the existing system where users (specialists or any other user role) can

manage all the preferences created within this new platform. This includes settings like default templates and the time frame for transcript deletion.

Minimum Data Requirements Per Patient Appointment

Patient Identification

- Patient Name
- Referring Doctor
- Specialist
- Appointment date

Checklist dynamically updates Points mentioned once the Patient is identified and associated Specialist. The checklist items are sorted by current stage of patient (intake, arrival, etc). This concept is prone to fail the most and can potentially be the biggest bottleneck as we need to be absolutely sure what happens in each case. It is the most important module because this becomes the basis for letter generation, and analytics. Even the checklist items themselves if not helpful and shown at the right time when the user expects to see them is a failure so proper strategizing needs to be done including when exactly the specialist specific points show up (each specialist can have common supporting team members and since each specialist sets up their own wheel it complicates stuff for supporting team members as well) , when do the defaults show up, how do we identify the patient and many more edge cases we have not yet thought about. The idea here is to serve as a helping hand and if not done right will become a distraction.

For Analytics:

- Patient Name
- Referring Doctor
- Specialist
- Appointment date
- Patient Visit Status (Showed/No-show)
- Treatment Presentation Status
- Treatment Value
- Insurance Status (In-network/Fee-for-service) - Optional
- Treatment Acceptance Status (Yes/No)
- Decline Reason (if applicable)
- Case Types
- Presented vs. Accepted vs. Completion Value
- Number of Treatments by Patient for this visit

- Number of visits required/made for a Treatment

For Letter Generation:

- Patient Name
- Referring Doctor
- Specialist
- Appointment date
- Past medical history
- Visit Type (Follow-up vs. New Visit)
- Treatment continuity information
- Referring doctor email
- Patient email
- Patient phone number
- Treatment type
- Letter-specific variable data

Data Organization Model:

- Patient → Treatment (Virtual - Internal not shown in frontend) → Procedures over multiple appointments (Both need to be recorded) → UI shows patients → appointments

Default Checklist Items by Role

Receptionist (Front Office):

- **Intake:**
 - Patient's full name
 - Referring doctor's name
 - Reason for referral
 - Main goals or expectations from the appointment
 - Insurance information
 - Contact preferences
- **Arrival:**
 - Greet patient by name
 - Acknowledge referring doctor
 - Verify insurance/payment information
 - Update contact information if needed

- Explain office procedures

Treatment Consultant:

- **Exam:**
 - Confirm purpose of visit
 - Ask permission for records
 - Explain value of diagnostic records
 - Address immediate concerns
 - Set expectations for specialist involvement
- **Treatment Planning:**
 - Main goals of patient
 - Goals shared with referring dentist
 - Priorities for smile and long-term health
 - Concerns about treatment
 - Financial considerations
 - Treatment timeline expectations
- **Follow-Up:**
 - Confirm appointments scheduled
 - Note any concerns or barriers
 - Ensure referring doctor letter is sent
 - Schedule any required follow-ups
 - Provide educational materials

Specialist:

- **Case Acceptance:**
 - Present treatment plan clearly
 - Get verbal confirmation of understanding
 - Outline number of appointments
 - Review financial commitment
 - Acknowledge decision to move forward
 - Answer clinical questions
 - Address any remaining concerns
- **Treatment/Procedure:**
 - Procedure-specific notes
 - Patient comfort level

- Adjustments to treatment plan
- Post-procedure instructions
- Follow-up requirements
- Prescription information

Action Items and Dependencies

1. Finalize template management flow and onboarding customizations
2. Develop specialist profile settings
3. Finalize permissions framework for clinical notetaker agent
4. Finalize strategies around Session checklist
5. Strategy requirements for engagement opportunity recommendations
